

# MESH PARTITIONING

- **CREATE SECURE ENCLOSURES**
- **PROTECT AGAINST FALLING GOODS**
- **CUSTOM DESIGN & MANUFACTURE**
- **ACCESS GATE & LOCKING OPTIONS**
- **SIMPLE TO INSTALL**
- **EASY TO MODIFY & EXTEND**

# EUROMECH MESH PARTITIONING

EUROMECH STEEL MESH PARTITIONING provides the answer to your security needs by dividing and securing areas. It is easily installed yet provides a rigid and secure partition system. The wire mesh design allows clear visibility without restricting light and airflow.

## MESH PARTITIONING

EUROMECH PARTITIONING is a cost-effective modular steel mesh panel system that is custom-designed according to your specific requirements. The system gives you full scalability, whatever your available space or requirements are. These may include security doors/gates with suitable frames and locks, secure walls or any other reinforcements you may require.

## ANTI-COLLAPSE SYSTEM FOR PALLET RACKING

Anti-Collapse Mesh is a preventative measure which has helped avoid many accidents in the handling of pallets. Mesh wire panels are mounted onto the rear of racking by brackets. There are a choice of bracket sizes to allow for varying gaps between the mesh and rear beams to accommodate projecting items.

The system continues to provide optimum visibility and fire security within the pallet rack.

## WIRE MESH DECKING

A strong and cost-effective alternative to timber that maintains the integrity of overhead sprinkler coverage – a fire safety choice. A range of sizes to suit most beam lengths.

Mesh panels can be hot dip galvanised to withstand outdoor use and cold room/ refrigerated storage.
